

## **Medusa**

### **Pitching instructions - english**

Assemble the fiberglass poles by interlocking the single shock-corded segments.  
Carefully select your final campsite.

#### **Step 1**

Spread the gazebo on a clean and flat surface.  
Insert the assembled fiberglass poles into pole sleeves and place both pole ends into the corresponding black connectors located on the roofs corners.

#### **Step 2**

Assemble the metal poles.  
Place one end of the metal pole into the metal pin (lower side) and insert the opposite end into the black connector (upper side). Repeat this procedure with all metal poles.  
Your Outdoor Gazebo is erected now.  
Secure the gazebo by pegging down the corners loops.

#### **Step 3**

Finally stabilize and secure the whole gazebo against strong wind with the included guy ropes and pegs.

**Always ensure not to exceed the tension.**
